

Happy Anniversary, Mister President!

Iraq
Commemorating the fourth anniversary of the war.

ONE THIRD OF IRAQ VETERANS SUFFER FROM MENTAL ILLNESS

LONG LIVE GEORGE BUSH!

Ingratitude
An American study reveals that many Iraq veterans do not receive proper treatment upon their return, many of them suffering from mental illness.

Did you know?

A 330 metre long asteroid is heading towards the Earth!

It's all true!
The probability of collision is estimated at one in forty five thousand which, in Space terms, is enormous.

This means that - on 13 April 2036 precisely - a country the size of Great Britain could be wiped off the planet!

We are taking the problem very seriously, Mister President. We have to try and change this asteroid's path!

Yeah! Let's make it hit Iran instead!

...And sooner than 2036, if possible.

Big rock

American scientists are concerned about a large asteroid that could hit the Earth in less than 30 years. In the Middle East, Washington is now seriously thinking of bombing Iranian military sites in order to destroy Tehran's nuclear capabilities.
